

Hackathon Use Case Brief

1. Goals and Motivation

Challenge Name: Implementation Accelerator for Professional Services

Core System / Intelligence Layer Name: AI-supported implementation learning and enablement layer for onboarding, role guidance, playbooks, checklists, and scenario practice

Sponsor (Company / Business Unit): Realpage / Professional Services (Implementations); Becky Tiner is the business sponsor and Professional Services owns the business outcome; Sarah Jackson and the onboarding content team provide implementation expertise

Business Unit / Product Name: Professional Services / Implementation Accelerator for Engagement Coordinators and Engagement Managers

Domain: Professional Services, implementation onboarding, role enablement, process standardization, learning experience, and customer delivery consistency

Problem Statement

Describe the core problem:

Professional Services teams manage a rich set of process- and product-specific implementation knowledge. Implementation Accelerator brings SOPs, playbooks, presentations, recordings, agendas, cadence, and checklists into one clear experience so new Engagement Coordinators and Engagement Managers can build confidence faster, apply the right steps by role, product, and stage, and keep customer delivery consistent.

Key Opportunity Areas:

- Professional Services has a rich body of onboarding and implementation knowledge that can be organized into reusable modules and clear learning objectives.
- Engagement Coordinators and Engagement Managers benefit from a consistent role, product, and implementation-stage checklist that makes the next best step easy to see.
- Self-paced guidance, live SME touchpoints, and scenario-based practice can work together to accelerate confidence and strengthen learning retention.
- Realpage Engaged, product implementation differences, customer experience practices, and add-on and new-logo playbooks can be brought together in a role-aware learning experience.
- A structured update and versioning workflow keeps playbooks, owners, routing, product guidance, and process steps aligned as Professional Services evolves.

VCP Alignment

Transform - Elevate Employee Engagement: Give new team members a clear, supportive path to role confidence, development, and connection to the broader Professional Services team.

Transform - Unlock Internal AI: Apply internal AI to make implementation knowledge easier to find, understand, practice, and maintain in everyday work.

Transform - Deploy a One Realpage Customer Engagement Model: Strengthen consistency in how implementation teams learn, prepare, and deliver customer outcomes across roles, products, and geographies.

Protect - Enhance Voice of Customer & Feedback Loops: Connect implementation learning to customer experience practices, delivery feedback, and continuous improvement.

Reference Workflow Diagram

Role and product context -> approved onboarding materials -> modular learning sections and objectives -> role, product, and stage checklist -> scenario or gamified practice -> self-paced and live learning path -> human SME review -> reusable onboarding and maintenance experience

Scope boundary: The accelerator focuses on Engagement Coordinator onboarding for add-on customer work and is designed to support Engagement Manager onboarding and new-logo implementations. It uses approved internal materials, source-linked learning, and human SME review to keep guidance aligned to Professional Services practices and customer outcomes.

2. Hero Features - What You Could Build

Choose one focused direction and define the smallest useful prototype.

Feature	Description
Standardized modular playbook	Organize implementation knowledge into clear, reusable modules with learning objectives, source links, and practical outcomes.
Role, product, and stage checklist	Give Engagement Coordinators and Engagement Managers a practical checklist that reflects role, product, implementation type, and project stage.
Self-paced and live learning path	Show which modules learners can complete independently and where live SME guidance, coaching, or practice adds value.

Feature	Description
Scenario and gamified practice	Use realistic implementation scenarios, customer moments, and exercises to reinforce Realpage Engaged navigation, product differences, and delivery decisions.
Fast update and versioning workflow	Make it easy for Professional Services owners to keep steps, people, product guidance, and routing current in one reusable experience.
Onboarding progress and confidence view	Give learners and leaders a clear view of completed modules, practice progress, next steps, and readiness for role-based work.

Expected Hackathon Demo

Demonstrate an implementation-facing learning experience where a new Engagement Coordinator selects a role, product, or project stage and receives a modular lesson, checklist, realistic scenario, and clear next step. Show the same knowledge translated into a leadership-ready view of onboarding progress, self-paced versus live learning, and the practical implementation story.

3. Hints and Resources

Data Sources

Data	Description
Engagement Coordinator onboarding SOP and playbook	Primary source for the onboarding sequence, steps, responsibilities, and expectations.
Onboarding slide decks and presentations	Role- and session-based presentation content created for the onboarding experience.
Onboarding recordings and transcripts	Live explanations, examples, and practitioner context that enrich the learning modules.
Agendas, sequence, cadence, and checklists	Learning order, timing, recurring sessions, and completion structure for a repeatable onboarding journey.
Engaged and product implementation guidance	Process-specific reference for navigation, project movement, customer experience, and product differences across implementation work.
New-logo and add-on implementation playbooks	Implementation patterns and delivery context that help learners connect role guidance to customer outcomes.

Related work already underway

Professional Services is already creating and using onboarding presentations, SOPs, playbooks, agendas, checklists, and implementation guidance across Engagement Coordinator and Engagement Manager work. Implementation Accelerator brings these materials into one modular experience and extends existing Professional Services practices with scenario-based learning, role-aware checklists, and an easy-to-maintain knowledge model.

AI & Cloud Tools (Optional but Encouraged)

Tool	Purpose
Approved AI assistant	Extract, organize, summarize, and draft learning modules, checklists, scenarios, and role-based guidance from approved internal materials.
Document, PowerPoint, and transcript ingestion	Bring together the SOP, presentations, recordings, agendas, and checklists in a traceable source set.
Approved Professional Services knowledge library	Ground the learning experience in approved OneDrive, SharePoint, or other designated internal materials.
Checklist and playbook template	Give teams a consistent structure for objectives, steps, exercises, owners, and completion evidence.
Knowledge and version tracker	Organize source versions, process updates, reviewers, effective dates, and the maintenance experience.
Learning or presentation workspace	Present modular lessons, scenarios, progress, and leadership-ready implementation insights.

4. Evaluation Criteria

Criterion	What Success Looks Like
Learning Capability Approach	Teams create a process-specific learning asset, explain the source material, organize modules, show role-aware guidance, and demonstrate where human SME review supports the experience.
Compliance & Safety Approach	Use approved internal documents, sanitize examples, protect customer information and credentials, and preserve human Professional Services judgment.
Accuracy & Consistency Approach	SMEs agree with steps, sequence, product and process nuances, links, owners, and self-paced versus live recommendations.

Criterion	What Success Looks Like
Automation & Scalability Approach	Convert approved source materials into a reusable playbook and checklist structure that can be applied across Professional Services roles, products, and implementation stages.
Enterprise Readiness Considerations	Professional Services ownership, Engagement Coordinator and Engagement Manager role guidance, source-linked learning, accessible modules, scenario practice, update experience, and adoption visibility are built into the model.

5. Why It Matters

Business Impact Summary: Implementation Accelerator for Professional Services gives Realpage a repeatable way to turn implementation expertise into a clear, engaging, and scalable learning experience. It can shorten the path to confidence for new team members, improve consistency across Engagement Coordinator and Engagement Manager work, reduce repetitive explanation, strengthen customer delivery, and make implementation knowledge easier to share across products, roles, and geographies. The result is a Professional Services enablement experience that supports growth, learning, and a more consistent customer experience.

6. Dataset Appendix (If Applicable)

Primary Dataset Name: Approved Professional Services implementation onboarding knowledge set, including SOPs and playbooks, presentations, recordings or transcripts, agendas, sequence and cadence, checklists, and product implementation guidance

Key Join Fields: Module ID; role; product or implementation type; implementation stage; source document and version; owner; self-paced or live flag; scenario or practice type

Evaluation Methodology: Compare the generated learning experience, playbook, checklist, and scenarios with SME-approved Professional Services references. Measure completeness, sequence accuracy, process and product nuance, source traceability, learner clarity, practice usefulness, progress visibility, update simplicity, and self-service value.
